About Me

I am a software engineer with 14 years of experience in software development, software design, leading teams, and participating in software architecture design teams. I was fortunate enough to work with brilliant and talented people in software industry and put in practice what I learned through my bachelor's and master's degree. That experience gave me an opportunity to identify real problems that programmers and software designers deal with on a daily basis.

Currently, as a PhD student and a Graduate Research Assistant at the department of Software Engineering at Rochester Institute of Technology (RIT), NY, US, I'm seeking to leverage Program Analysis, API Recommendation, Program Synthesis, Formal Methods, and other techniques to help programmers with automatically generating a program that is syntactically and semantically correct. I'm always passionate about learning new things and facing new challenges.
